

5-paragraph Argumentative Essay Example 1:

The use of animals in scientific research is a controversial subject. While some believe that animal testing is an essential part of medical development, others argue that it is morally wrong and should be banned altogether. To make my stance clear, I firmly believe that animal testing should be prohibited because it does not always yield accurate results, it is cruel and inhumane, and there are alternative methods of testing that produce more reliable results.

First of all, animal testing is not always accurate. Animals do not react to drugs like humans do, so the data yielded by studies conducted on animals cannot be extrapolated to human trials with any degree of accuracy. This means that experiments conducted on animals are not always reliable and sometimes do more harm than good.

Second, animal testing is cruel and inhumane. Animals are subjected to painful experiments that can cause them physical pain and suffering, as well as psychological trauma. This violates the moral code of many people who believe that all creatures deserve to be treated with respect and kindness.

Third, there are alternative methods of testing that yield more reliable results. For example, computer simulations and test tube experiments can be used instead of animal testing. These methods are not only more humane, they also provide much more accurate data than animal studies.

Finally, it is important to consider the ethical implications of animal testing. It is widely accepted that animals do not have the same rights as humans and should not be subjected to cruel experiments. Therefore, it is wrong to use animals in experiments when there are other methods available that can provide more reliable results.

In conclusion, animal testing should be prohibited because it is inaccurate, cruel, and unnecessary. It is important to consider the ethical implications of animal testing and to weigh the benefits of accurate results against the cost of causing pain and suffering to innocent animals. There are alternative methods that can be used instead, so it is time for us to embrace them and put an end to animal testing once and for all.
