

Argumentative Essay 8th Grade

It is clear that the world we live in today is increasingly more digital, and it goes without saying that technology should play a role in education. However, while technology can be a useful tool to enhance learning, schools should not rely on it too heavily as there are drawbacks to having an over-reliance on tech in classrooms.

One major issue with relying on technology for teaching is that students may become too reliant on it as well. It's possible for students to simply plug into a computer or tablet and learn from online lessons instead of actually engaging with the material. This can result in students failing to fully understand what they are being taught since they are not actively participating in their learning process. Additionally, relying too much on technology can reduce the chance for teacher-student interactions, which are an important part of learning.

Another issue is that technology can be unreliable. It's not uncommon for computers or tablets to malfunction or even crash during use, and this could disrupt a lesson or assignment.

Additionally, many software programs and applications require regular updates in order to function properly, and if they are not updated in the time it can cause issues with students being able to access the material they need. This could lead to students falling behind in their studies due to technological setbacks.

Finally, there are some financial costs associated with having technology in classrooms as well. Schools may have to invest in new hardware or software in order to keep up with advances in digital learning. This could put a strain on school budgets, taking away from other areas of educational programming such as extracurricular activities or facility upgrades.

In conclusion, while technology can be an effective tool for teaching, schools should not have an over-reliance on it because of the various drawbacks associated with it. Schools should find a balance between traditional and digital methods in order to ensure that students are receiving a quality education.

At the 8th-grade level: Make sure to use transition words like “additionally” and “finally” to clearly signal when you are moving on to the next point in your argument.
